

Mission Hospital Neuroscience and Spine Institute

Mission Viejo, CA

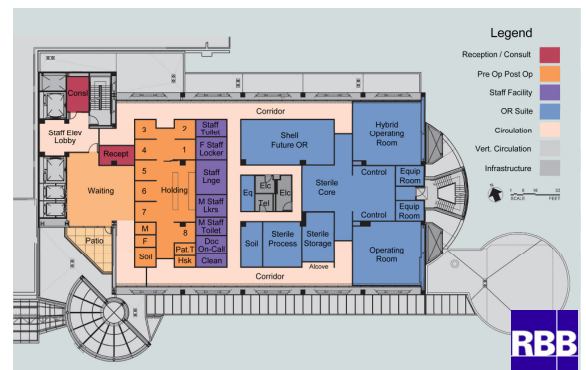

RBB was commissioned by St. Joseph Health System for the design of a new 15,000 SF Neuroscience treatment center in the basement level of the Mission Hospital Acute Care Tower. The project provides advanced care in the diagnosis and treatment of neurological diseases of the brain and spine. The addition features three new operating rooms including a hybrid OR, expanded diagnostic technologies, and state-of-the-art patient services.

The Neuroscience and Spine Institute meets the hospital's goal of creating neurological and neurosurgical centers of excellence, building on the expertise present among the founding physicians at Mission Hospital. The Institute supports collaboration among leading physicians to develop the best strategies for treatment. The successful project delivery was managed by Petra Integrated Construction Strategies.
